

Maintaining Your Ribbon Collection Trash Receptacle

Cleaning

Removing trash from your trash receptacles should be part of a regularly scheduled maintenance routine. Ensure bags are properly installed to avoid garbage and waste products piling up at bottom of receptacle. Seasonal debris like leaves and sticks should also be removed. Wipe down receptacle if there are liquids that have accumulated on interior or exterior as this will accelerate the rusting process and jeopardize the longevity of your Jamestown Advanced equipment.

Rust Removal

Not all rust is created equally. Surface rust is common and easily removable. However, if surface rust goes untreated it can lead to the detrimental and corrosive rust that will eat away at the integrity of your product. You can rub away rust with a sturdy wire brush. Then, you may apply an additional coat of non-toxic enamel paint to the cleaned area.
